

Module-2 Assignment

Problem Statement:

You work for XYZ Corporation. They have deployed their web app on the internet. Their users are complaining that the images are not loading fast enough. You realize that this might be because your website faces global traffic while the static assets like images are being served via a single server. Also the employees are complaining that it is difficult for them to access common files and tools, as they need to get it from each other.

You have been asked to:

1. Upload all static content of your web site to azure.
2. Create a CDN Endpoint and configure it to serve the static files you uploaded.
3. Create an Azure File Share and Upload all tools and files for your colleagues to share.
4. Connect a Linux and Windows VM Box to the File Share
